

Java Jumpstart: The Essentials

An intensive day that quickly makes participants productive in Java.

DURATION

1 day

LEVEL

Foundational

GROUP RATE

\$2,900

CURRICULUM & HIGHLIGHTS

- JVM & JDK Architecture
- Variables & Data Types
- Control Flow & Logic
- Loops & Iteration
- Method Design & Structure

Starting the journey in Java can feel overwhelming due to configuration and strict syntax. Without a guided start, it's easy to get bogged down in technical details instead of focusing on actual business logic and programming craftsmanship in your daily projects today.

This workshop eliminates the learning curve through Active Learning pedagogy where practical work is at the center. I guide you through the entire process from installation to variables and program structure. The day concludes with you having built your first real application and established a solid understanding of how the JVM works with modern standards. We create a stable foundation for professional development that prepares you for more advanced topics and architectural choices in the future here today in this course.

TERMS

Fixed rate (max 12) for remote delivery. Extra costs for onsite.

YOUR OUTCOME

You gain confidence in writing, compiling, and running professional Java code.

TARGET AUDIENCE

For developers needing a fast and stable start in the modern Java ecosystem.

PREREQUISITES

Prior experience with another programming language is recommended for pace.

RECOMMENDATION

Continue with the workshop 'Modern Java Bridge' to learn the latest features.
