Spring AI Foundations: AI Engineer

Actlea's most complete AI training for modern Java teams.

DURATION	LEVEL	GROUP RATE
3 days	**Professional**	**On Request**

─ CURRICULUM & HIGHLIGHTS

- LLM Integration & Strategy
- Enterprise RAG Pipelines
- Vector DB Management
- AI Agents & Function Calling
- Orchestration & Reliability

Moving from a simple chat prompt to a sophisticated agent-based Enterprise system requires a deep understanding of both models and orchestration in a Java environment today. Without the right architecture, AI initiatives risk stalling at simple prototypes that never reach production.

Over three intensive days, we build the entire AI stack together through Active Learning. We move from basic integration to advanced knowledge management with RAG and finally autonomous, intelligent agents acting in the systems. This course is deeply rooted in practical project work, transforming traditional backend developers into future AI Engineers. You gain the ability to design and deliver intelligent applications that are robust, scalable, and ready to meet the challenges that next-generation software places on modern development teams here today.

TERMS
Price on request. Delivery available remote and onsite.

YOUR OUTCOME
Comprehensive knowledge for the AI Engineer role in the modern Java world now.

TARGET AUDIENCE
Development teams wanting to deliver complete AI solutions in Java professionally.

PREREQUISITES
Strong experience in Java and Spring Boot is required for this three-day track.
