Spring AI Jumpstart: Essentials

Jumpstart the journey into AI development and integrate LLM models into your Java stack.

DURATION	LEVEL	GROUP RATE
1 day	**Professional**	**$2,900**

CURRICULUM & HIGHLIGHTS

- Spring AI Architecture
- ChatClient & Prompts
- Model Configuration
- Type-safe Output Parsing
- RAG Design Patterns

The AI wave creates pressure to integrate intelligent features, but moving from a chat prompt to a robust Enterprise solution is complex. Without the right tools, LLM integration in Java becomes fragile and lacks type safety when handling unpredictable responses. This causes teams to get stuck in prototyping instead of delivering production-ready code that creates actual business value and stability. This creates an environment that is both difficult to manage and highly inefficient for any development team.

In this workshop, I guide you through the foundations of Spring AI to bridge the gap between Java and generative AI. We explore practical integration of models like OpenAI and Azure, where I show you how to leverage Java's type stability to parse AI output into well-formed objects. Through my Active Learning concept, we build intelligent services ready for the real world today.

TERMS
Fixed rate (max 12) for remote delivery. Extra costs for onsite.

YOUR OUTCOME
You leave the day with the ability to build type-safe AI integrations and AI services.

TARGET AUDIENCE
For Java developers who want to integrate LLM models into their applications today.

PREREQUISITES
Prior knowledge equivalent to my workshop 'Spring Boot Jumpstart: Essentials' is required.

RECOMMENDATION
Once the foundation is laid, I recommend giving your AI access to company data in a workshop soon.

TECHNOLOGIES & FOCUS

SPRING AI | LLM | GENERATIVE AI | JAVA | OPENAI | PROMPTING
