Rapid Web Dev: MVC & Thymeleaf

> *Build powerful web applications quickly without frontend complexity.*

DURATION	LEVEL	GROUP RATE
1 day	**Professional**	**$2,900**

CURRICULUM & HIGHLIGHTS

- Spring MVC Architecture
- Thymeleaf Syntax & Layouts
- Form Binding & Validation
- Session & Flash Attributes
- I18n & Internationalization

Despite the trend towards SPA frameworks, Server-side Rendering (SSR) remains incredibly powerful for quickly delivering internal tools or admin interfaces without the complexity of modern frontend projects today.

This workshop teaches how to master Thymeleaf with Spring MVC for effective web development through Active Learning. We focus on dynamic rendering, secure form handling, and server-side validation in a cohesive environment. I demonstrate how to build interactive interfaces with minimal JavaScript by leveraging Spring's powerful MVC patterns, session management, and layout strategies. We build solutions that are fast to develop, easy to maintain, and deliver immediate business value to the organization without needing a dedicated frontend team for every view here today.

TERMS

Fixed rate (max 12) for remote delivery. Extra costs for onsite.

YOUR OUTCOME

Knowledge to build complete SSR web applications with forms and validation now.

TARGET AUDIENCE

Teams needing to quickly build internal tools or admin interfaces using Spring.

PREREQUISITES

Basic experience with Spring Boot equivalent to 'Spring Boot Jumpstart' is required.

RECOMMENDATION

Expose your data externally with the 'RESTful APIs with Spring Boot' workshop next.
